TABLES

TABLE I. LDA calculated (cal) equilibrium zinc-blendelattice constants a (in Å), bulk moduli B (in kbar), and the pressure derivative B' of the bulk modulus. Results are compared with available experimental (exp) data (Ref. [1]). Compounds denoted by an asterisk exist in wurtzite structure, while HgS exist in the cinnabar structure. For these compounds a_{exp} and B_{exp} are estimated from the properties of their wurtzite countpart or from LDA calculations.

Compound	a_{cal}	a_{exp}	B_{cal}	B_{exp}	B'_{cal}

TABLE II. LDA Calculated band gap volume deformation potentials [Eq. (2)] (in eV) and pressure coefficient [Eq. (1)] (in meV/kbar) of the three main transitions , $_{8v} \rightarrow X_{6c}$, , $_{8v} \rightarrow L_{6c}$, and , $_{8v} \rightarrow$, $_{6c}$ for group IV, III-V and II-VI semiconductors. Results for $a_p^{\Gamma-\Gamma}$ are compared with available experimental (exp) data (Ref. [1], unless specified otherwise).

Compound	$a_v^{\Gamma-X}$	$a_p^{\Gamma-X}$	$a_v^{\Gamma-L}$	$a_p^{\Gamma-L}$	$a_v^{\Gamma-\Gamma}$	$a_p^{\Gamma-\Gamma}$	$a_p^{\Gamma-\Gamma}(exp)$
